Ahrefs
Hiring Team

September 5, 2025

Dear Ahrefs Hiring Team,

I am writing to apply for the Machine Learning Engineer position. The opportunity to work with Ahrefs SuperPod's top-tier computing infrastructure to push the boundaries of AI is incredibly compelling.

My expertise lies in the full-stack development of LLMs. I have hands-on experience fine-tuning large models (e.g., a 20B parameter model for MillionScope) using modern PEFT methods like **QLoRA** and **RLHF**. I am adept at optimizing and deploying these models for production using **SGLang**, **ONNX**, and **TensorRT**, directly aligning with your focus on inference latency and efficiency.

While my projects have operated on a smaller scale, they have provided a deep foundation in the core principles of efficient training and serving. I am confident in my ability to rapidly contribute to and learn from your large-scale distributed environment.

I am eager to discuss how my skills in turning research into production-ready AI can bring value to Ahrefs.

Thank you for your consideration.

Thanh Hoang-Minh
