Speechify
Hiring Team

September 5, 2025

Dear Speechify Hiring Team,

I am writing to apply for the **Senior Software Engineer** position at Speechify. The opportunity to contribute to a product that makes reading accessible through state-of-the-art TTS technology strongly aligns with my experience and interests.

I'm creator of ParrotSpeech TTS (A vietnamese fine-tune of F5-TTS), experience fine-tuning GPT-OSS models, using quantization methods like QLoRA and deploying them in production environments. I am proficient in optimizing inference latency and cost through techniques such as ONNX export, and kernel-level optimizations.

Additionally, I have extensive experience deploying high-availability applications on Kubernetes and AWS platforms, with a strong focus on building resilient, scalable backend systems. My work on end-to-end AI products, from data curation to model serving, has prepared me to contribute effectively to **Speechify's** infrastructure.

I am particularly drawn to Speechify's mission of aiding those with learning differences and am excited about the prospect of applying my skills to create impactful, life-changing technology.

Thank you for your consideration.

Thanh Hoang-Minh
